Sovereign Cloud Solutions

Compliant. Controllable. Future proof.

Why Sovereign Cloud?

Public institutions and regulated organizations face increasing pressure to process their data digitally, securely, and in compliance with legal requirements. Traditional public clouds often reach their limits due to legal or organizational constraints. Sovereign Clouds are therefore especially relevant when it comes to data protection, digital sovereignty, and meeting regulatory requirements.

What is a Sovereign Cloud?

A Sovereign Cloud is the key to a future ready, compliant, and trustworthy digital infrastructure. It enables organizations to leverage cloud technologies while meeting compliance requirements.

Typical characteristics include:

- ✓ **Data sovereignty:** Data is processed exclusively within the agreed legal jurisdiction.
- ✓ **Compliance:** Facilitates adherence to industry specific and legal regulations (e.g. GDPR, C5).

Cloud providers offer corresponding models – but for use within your own organization, these must be thoroughly evaluated with regard to legal frameworks and technical capabilities.

Consulting and implementation for organizations with the highest requirements for data protection and digital sovereignty.

Our consulting services for Sovereign Cloud:

- + Requirements analysis**
Which sovereignty and compliance requirements apply to your organization?
- + Provider and architecture comparison**
We evaluate available Sovereign Cloud offerings based on technical, legal, and organizational criteria.
- + Strategy & roadmap**
Based on your IT landscape, we develop a tailored Sovereign Cloud concept for your organization.
- + Implementation & governance**
Deployment, migration, security, key management, roles, and processes – all delivered with practical expertise and audit proof governance.

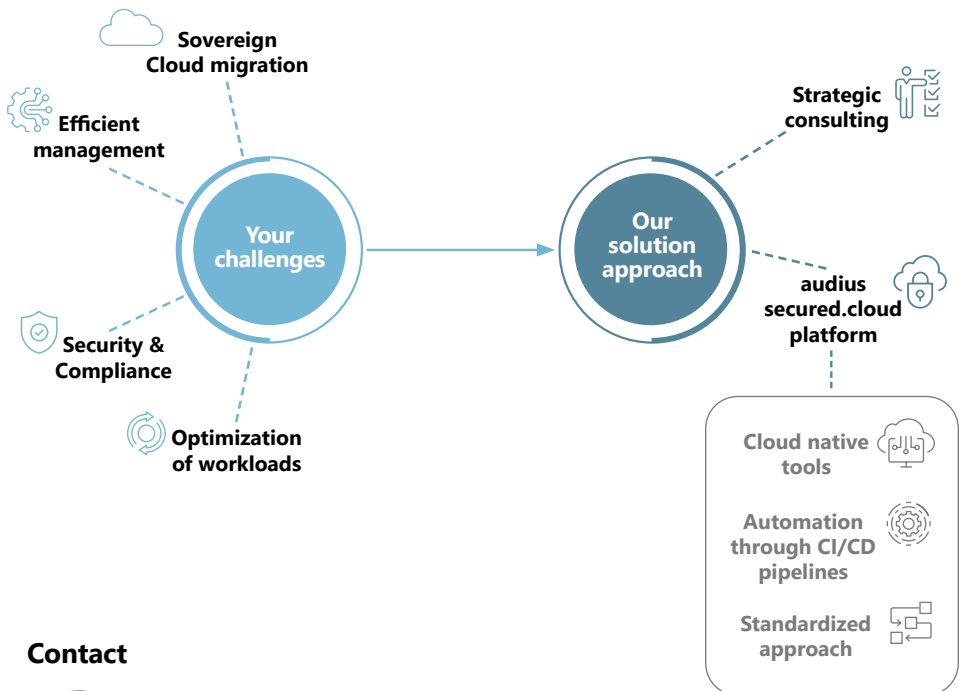

We provide independent, expert, and vendor neutral consulting to support your journey towards a Sovereign Cloud.

- >** Which solution meets your requirements?
- >** How can you prevent access from third countries?
- >** How do you ensure compliance with standards like GDPR, ISO or C5?
